

Product	Chem. Description	Features and Benefits
LUVOGEL® 4	Organically Modified Montmorillonite	Creates in formulations a shear thinning flow profile with thixotropic properties and a slight viscosity increase. Excellent for low to medium polar systems. Activator needed.
LUVOGEL® 7	Organically Modified Montmorillonite	Creates in formulations a shear thinning flow profile with thixotropic properties and a slight viscosity increase. Excellent for medium to high polar systems. Activator needed.
LUVOGEL® W2N	Synthetic Na-Li-Mg-Silicate (Hectorite)	A strong shear thinning flow profile with thixotropic properties is achieved in water-based formulations. Easy dispersible and suitable for use in a wide pH-range.
